

FloraCup is flexible and elegantly presents the plant. It prevents tangling and protects the plant during transport from greenhouse to consumer. FloraCup also enhances the look of the foliage and holds the plant in its ideal shape while preserving moisture.

FloraCup comes in seasonal colors with bar coding or a custom label and with or without handles. In order to ensure proper watering after being shipped from the greenhouse, FloraCup can be delivered with a perforated bottom or without a bottom. Available for most types of plants, also in smaller quantities. {jcomments off}
